### **CSE 331L / EEE 332L**

# **Microprocessor Interfacing & Embedded System**

Section: 2 (Fall 2021) Lab- 02: Functions

### **Example:**

```
.MODEL SMALL
03
   .STACK 100H
04
   . DATA
05
        NAME DB
06
   . CODE
07
        MOV AH,
08
        MOV DL,
09
        INT 21H
10
        MOV AH,
                 4CH
        INT 21H
```

**.MODEL** is the directive to specify the size of the memory (code and data) the program needs **.STACK** is the directive used to declare the stack segment. It sets aside a block of memory (in stack segment) to store the stack.

.DATA is the directive used to declare the data segment

**.CODE** is the directive used to declare the code segment

#### **INT** (Interrupt):

Interrupt-number 21h used to invoke DOS functions.

### **Functions**

Function #	Routine	Function Execution
1	Single-key input	<ul> <li>Choose the function # as required</li> <li>Place the function number in AH register (input)</li> <li>Invoke the instruction for interrupt where the function needs to be executed: INT 21H</li> </ul>
2	Single-key output	
9	Character string output	
4CH	DOS exit function	

### Function# 1: Single-key input

```
Input: AH = 1

Output: AL = ASCII code if character key is pressed

AL = 0 if non-character key is pressed
```

```
02
   .MODEL SMALL
03
   .STACK 100h
04
05
   . CODE
06
        MOV AH,
07
        INT 21H
80
09
        EXIT:
10
        MOV AH,
                 4CH
        INT 21H
11
12
```

## **Function# 2:** Single-key output

```
Input: AH = 2
DL = ASCII Code of the display character
```

**Output:** AL = ASCII Code of the display character

```
02
   .MODEL
            SMALL
03
   .STACK 100h
04
05
    . CODE
        MOV AH,
06
        MOV DL,
07
08
        INT 21H
09
10
        EXIT:
11
        MOV AH,
                  4CH
12
        INT 21H
```

### **Single-key Input/Output**

```
02
   .MODEL SMALL
   .STACK 100h
03
04
05
   . CODE
06
        MOV AH,
                      ; input in AL
07
        INT 21H
08
        MOV BL, AL
                      ;input moved to Bl
09
10
        MOV AH,
                 2
        MOV DL,
11
                 BL
        INT 21H
12
13
14
        EXIT:
15
                 4CH
        MOV AH,
16
        INT 21H
```

### **Insert newline:**

```
02
03
    .MODEL SMALL
    .STACK 100h
04
05
    . CODE
06
         MOV AH,
                   1
                         ;input in AL ;input moved to Bl
07
         INT 21H
08
         MOV BL, AL
09
10
                   2
         MOV AH,
                   10
11
         MOV DL,
12
         INT 21H
13
         MOV DL,
INT 21H
                   0DH
14
15
16
         MOV AH,
                   2
17
         MOV DL,
                   BL
18
         INT 21H
19
20
         EXIT:
21
22
         MOV AH,
                   4CH
         INT 21H
```

## **Multiple key Input**

1. Take 3 single-key inputs and display the second input taken using the output function in a separate line.

```
Sample input & output

hk3
k
```

```
02 .MODEL SMALL
03 .STACK 100h
04
05 . CODE
06
        MOV AH, 1 ; function# 1
07
08
        INPUT:
09
        INT 21H
10
11
12
13
14
15
        MOV BH, AL ;1st input in BH
        INT 21H
        MOV CH, AL ; 2nd input in CH
        INT 21H
16
17
18
19
20
21
22
23
24
25
26
27
28
29
30
31
32
        MOV DH, AL ; 3rd input in DH
        OUTPUT:
        MOV AH, 2 ; function# 2
        MOV DL, OAH ; ascii of newline
        INT 21H
        MOV DL, ODH ; ascii of cret
        INT 21H
        MOV DL, CH ; display the 2nd input
        INT 21H
        EXIT:
        MOV AH, 4CH
        INT 21H
```
